

Samuel Connor

AI-Native Full-Stack Developer

samconnor2020@outlook.com [Portfolio](#) [LinkedIn](#) [GitHub](#)

PROFESSIONAL SUMMARY

AI-native full-stack developer who ships production web apps with **Cursor** (and Copilot): I direct implementation, review architecture, UX, security, and compliance, then verify with tests, builds, and release checks before anything ships. Currently building **Lantern Medical** (Astro site for UK film/TV healthcare staffing) and **SENBridge (England)** — a pre-trial SEND guidance platform with RAG, Gemini, invite-only auth, compliance-aware UX, and practical security hardening before release.

TECHNICAL SKILLS

How I build: Cursor-first AI-augmented development — brief, generate, refactor; reject scope that fails product or risk gates; own go-live decisions. Verify AI output with automated tests, production smoke, and security scans. Comfortable in AI-forward teams.

Stacks I ship with: TypeScript/JavaScript, React, Next.js, Astro, HTML/CSS, Tailwind; Node.js, Express/Koa, PostgreSQL, Prisma, MongoDB, REST APIs, NextAuth; occasional Python for scripting/tooling.

Security & quality: OWASP ZAP scanning and triage; securityheaders.com; CSP/HSTS hardening; Husky pre-commit/pre-push hooks (secret scanning, security unit tests, audit gates); robust automated tests (Jest, Playwright, Cypress) and GitHub Actions CI/CD.

Delivery: Git/GitHub, feature flags, invite-only auth, Railway/Cloudflare deploys, Docker, Figma, accessibility-minded UI.

KEY PROJECTS

SENBridge (England) — SEND Guidance Platform

Pre-trial AI chatbot for parents, carers, and SEND professionals. Live: senbridge.uk

- Streaming APIs, RAG + Gemini citations, NextAuth (invite-only), favourites/letter drafts, export/delete.
- Release practice: Husky pre-commit/pre-push hooks, Jest/Playwright suites, OWASP ZAP and security-header scans, CSP/HSTS hardening.
- Human ownership of product, compliance, and go-live gates — including what not to ship yet.

Tech: Next.js, TypeScript, PostgreSQL, Prisma, NextAuth, Playwright, Railway, Cloudflare

Fashion Knowledge Base & AI-Ready Data Pipeline

Scraping/ingestion platform that structured ~2,500 fashion items for a specialised AI assistant.

- Automated collection and normalisation into Prisma-backed storage for recommendation/training use.
- Iterated with AI-assisted refactoring and test support under human review.

Tech: Next.js, TypeScript, Prisma, web scraping, databases

WORK EXPERIENCE

Web Developer (Freelance)
Lantern Medical

2026 – Present

- Building [lanternmedical.co.uk](#): multi-page Astro + TypeScript marketing site for a UK film/TV healthcare staffing agency (content-driven pages, enquiry flows, static production build).
- Information architecture for productions and clinician recruitment; custom CSS design system; privacy-aware contact patterns. Repo: [github.com/colaone1/Lantern-Medical-Main-Website](#).

Construction Labourer
Muls

2024 – 2026

- Precision and quality control under tight deadlines in schedule-driven teams.

Customer Experience
Warner Bros Studio Tour London

2023 – 2024

- Structured problem-solving for complex customer issues; calm under pressure.

Prop Hand
House of the Dragon (HBO)

2022 – 2023

- Detailed inventory tracking akin to database workflows on a major TV production.

EDUCATION & TRAINING

Software Development Bootcamp
The Developer Academy — Certificate of Completion (2025)

Agile team projects with React, Node.js, and MongoDB. Established an AI-augmented workflow with Cursor and Copilot.
